

IceBlaster Edge Melt System Channel Melt Panel (SP-CM)

The IceBlaster Edge Melt System Channel Melt Panel (SP-CM) is specifically designed to prevent ice dams that occur at dormers and other areas where melt water draining onto a roof surface can refreeze and create leak issues. Installation is simple. Base panel mounts over existing roofing material with supplied channel panel cleat. Install base extrusion. Route two runs of commercial grade self regulating heat cable. Prefinished aluminum cover panel is riveted to base panel for maximum heat transfer. Route any heat cable in gutter and downspout(s). Expert design layout and installation guidance are available with order.

Specifications:

Performance: Two runs of 13 watt (nominal) per foot industrial grade self regulating heat cable
 Base Extrusion: 6063 T5 Aluminum
 Cover Panel: .040 Kynar 500 prefinished aluminum

Warranty:

- 50 yr on base panel and cover panel material
- 40 yr on cover panel finish
- 10 yr on supplied heat cable
- See Warranty for complete details

Supplied Components:

- Base extrusion, panel cover, and splice covers
- Mounting hardware
- Commercial grade self regulating heat cable
 - C/US Listed for US and Canada
 - 110-130v or 208-277v (voltage specific)
- Power Connection Kit
- Extrusions and covers are 10' standard lengths
 - Standard Colors: Medium Bronze, Matte Black, Dark Bronze, Forest Green, Mansard Brown, 20 oz. real copper.
 - Special Order Colors: Complete line of UnaClad aluminum colors
 - Standard lengths can be cut to length

NOTE:

Roof features omitted for clarity. IceBlaster EMS products are fully compatible with most roof styles and systems. IceBlaster EMS CMP can be installed on a roof without a gutter.
